Clarification of the action and rejection limits

^a All action and rejection limits are based on 88% dry substances unless specified otherwise in legislation (or extra statutory) limits. Please consult the most recently consolidated version of the EU guidelines/regulations (such as <http://eur-lex.europa.eu/eli/dir/2002/32>) and current versions of extra statutory limits of:

-GMP+ (2010) BA1 Specifieke voeder veiligheidsnormen

or

GMP+ (2020) TS 1.5 Specifieke voeder veiligheidsnormen (<https://www.gmpplus.org/media/gohogssx/ts-1-5-specifieke-voeder veiligheidsnormen.pdf>)

or

Ovocom (<http://www.ovocom.be/FCA-Documents.aspx?lang=en>).

^b Pesticides supplement:

To assess the pesticide level in feed materials and in composite feed materials, also see SecureFeed instruction I-11-02 (Dutch).

^c *Salmonella* supplement:

Belgian companies must report every detection of *Salmonella*, to the FAVV.

To this end, please also see: FAVV (<http://www.favv-afscab.be/dierlijkeproductie/dierenvoeding/controle/>) (Dutch) *Salmonella*-exceedance in products, mainly feed materials that are subjected to heating or any other treatment in which *Salmonella* is eliminated, does not have to be reported to the NVWA and GMP+ International.

SecureFeed does require however that these *Salmonella* detections are reported so that any issues with raw materials can be detected at an early stage.

Please see I-11-04 for Instructions concerning *Salmonella* in poultry feed.

Exceedance of SecureFeed rejection limits below the level of statutory limits and/or GMP+ limits does not have to be reported to the NVWA and GMP+.

What to do if there is no limit?

For contaminants in products for which no limits have been defined, the limit is derived from similar products for which a limit has been defined.
